# Lavis Contracting

Started in 1938, Lavis Contracting is a business with deep roots in Ontario delivering a wide range of municipal and private sector services including hot mix paving, road maintenance, water and sewage projects as well as major bridge and contracting projects. Lavis is also the industry leader in Cold In-Place Recycling with an award winning, custom designed CIR recycling plant combining the crushing, screening and mixing of aggregates in a single working unit.

Lavis has been working with Energy Source since 2004 using a combination of strategic fixed gas and index purchases in order to keep their overall natural gas costs as low as possible, lower than their competition. For Gord Lavis, "The overall goal is to take as much risk out of the volatile gas market, to stabilize and lower our costs over the long term."
